Introduction

Martin Vinter

Managing Director of Media,
Ebiquity

With 2020 set to go down as the most turbulent and challenging of years in all of our careers in media and marketing, I'm delighted to record that some things remain constant. Three years on from the ground-breaking report we at Ebiquity produced with our friends and partners at Radiocentre in the 2018 study Re-evaluating Media, the same team has produced this follow-up report on the role and value of media in growing brands during uncertain times.

The original report generated extensive media coverage across the marketing industry. It also stimulated a lively debate in the market, with many stakeholders suggesting that the findings felt like a call-to-arms for more effective media planning. Others suggested that it provided evidence in support of the craft of planning in an increasingly fragmented and diverse media ecosystem.

Like the 2018 paper before it, the aim of this report was to identify the truth about media effectiveness for 10 different media types. It also set out to establish the gaps that exist between the reality and the perceptions of reality about which are the most effective media channels, while also identifying the critical media attributes required to grow brands. This is more relevant than ever in these most uncertain of times.

In the 30 months since our first report, there have been significant changes in the media market, while the coronavirus pandemic has introduced a whole new level of volatility and jeopardy for marketers. Many of the consequences of COVID-19 will reverberate for some months yet, and the after-effects are likely to linger for several years at least. At Ebiquity, we have been exploring the implications of this once-in-a-lifetime market upheaval across a number of standalone research studies in the past six months. As we look to a less unstable 2021, the industry can start to chart the road to recovery and – ultimately – new growth.

With this in mind, it felt like a perfect opportunity when Radiocentre approached us with a view to replicating the 2018 study. We have designed this new analysis – independent, impartial, and robust – to evaluate the role and value of media in delivering brand success during uncertain times. What's more, as we were using the same methodology as in 2018, we were able to understand what has changed since then.

There were four main phases in this collaborative project:

1. Identify what advertisers and agencies consider to be the most important attributes in delivering a campaign that grows a brand in a recessionary period
2. Evaluate how each medium performs against these attributes through a comprehensive review of published research and Ebiquity's proprietary data sets
3. Contrast this with views gathered from interviews with over 100 advertisers and agencies on how they experience each medium performing – the key to learning how far perception is from reality
4. Produce an overall ranking of relative value of each medium, based on the evidence collected

In short, the findings reveal that the disconnect between perception and the abundant evidence still obtains. To help close this gap, we believe that advertisers need to re-evaluate their approach to media and media planning as a matter of urgency. They need to measure clearly how media impacts the outcomes that matter to them, both in terms of media performance and against commercial objectives. They should then use these insights to inform media planning going forward, for the short term and the long term; for coping with the impact of COVID and beyond.

I trust you find this report interesting, timely, and helpful in your media decision-making. I look forward to discussing its findings with you.

A photograph of a woman with long brown hair, smiling and looking towards the left. She is in a kitchen, with a toaster and various kitchen items visible in the background. The image is partially covered by a dark blue overlay on the right side, which contains the text 'Key takeouts'.

Key takeouts

Overall findings

1. There is a high degree of alignment between the 2020 and 2018 studies on the five most important media attributes, with building brand salience now the most valued attribute.
2. There is still a significant gap between perceptions of individual media performance against each attribute and what the evidence shows – this overwhelmingly favours digital media.
3. Media spend continues to be driven by perception over evidence, with digital media occupying the top three slots in terms of projected changes in spend for 2021.

Implications

› Plan to clear media objectives and outcomes; track short and long-term

The fundamentals of best-practice media planning and measurement will always hold true. Sophisticated marketers will balance the roles and objectives of channels and formats to optimise and measure the media mix against both short (e.g. sales) and long term (e.g. brand health) business objectives.

› Plan short-term tactics with a view to maximise longer-term impact

In a period of uncertainty and media volatility, if possible, invest in media tactics for immediate return without negatively impacting brand building efforts. Changing market conditions presents opportunities as some advertisers divest.

Radio-specific findings

1. In terms of the evidence, radio remains the second most valuable medium after TV for successful marketing in a recession.
2. Perceptions of radio are catching up with reality for certain attributes (e.g. Targeting the right people in the right place at the right time; Building brand salience) meaning that radio's overall perception ranking has improved from 6th to 3rd.
3. These improved perceptions appear to be influencing spending intentions with a net figure of 19% of advertisers planning to invest more in the medium in 2021 vs. pre-COVID 2020 budgets – the highest net shift for any traditional medium.

› Understand the full advertising 'value-chain' from creative through to outcomes

Look beyond media metrics and contextualise media performance in the context of the full "advertising value chain" i.e. creative, cost, reach, attention and engagement (or other measures of value important to your organisation). Make sure all parts are working optimally together to generate ROI, profit and growth.

› Invest in analytics and outcome-focused partnerships

Build a strong data-science lead foundation to inform media investment decisions; break down any silos that hamper the ability to use insights (your own or 3rd party) in media planning. Ensure motivations of partners are aligned with your own and that their value-delivery to your organisation is fairly rewarded.

How the study was done

We conducted primary and secondary research between September and November 2020.

Primary research

We carried out a total of 102 online interviews with media decision makers at advertisers & agencies.

- › **Advertisers n=58 marketers and media experts in companies spending £2m+ on advertising in the last year**
- › **Agencies n=44 (32 media buying agencies, 8 full service agencies, 4 creative agencies)**

Relative importance of 12 media attributes was evaluated using maxdiff analysis where interviewees were asked to trade off the most and least important attributes in a number of different combinations.

Interviewees were not informed that the research was commissioned by the Radiocentre. All research was carried out in accordance with the Code of Conduct of the Market Research Society.

Secondary research

We searched over 50 sources and reviewed more than 100 published reports to find supporting evidence on how well each medium performs. To qualify for inclusion, the research study had to be recent (i.e. most published since 2010) with a transparent methodology and in the public domain.

We supplemented this with analysis of Ebiquity's proprietary data – norms from our data pools on CPT, profit ROI and other effectiveness measures.

Assessing performance on each attribute

We developed scoring criteria to rate media performance on each attribute. The approach to this varied depending on the attribute and nature of data available:

- › **Straightforward comparison of data (e.g. CPT)**
- › **Objective assessment of structural capabilities (e.g. yes, yes with limitations, no)**
- › **Score allocated objectively based on combining findings from a range of research studies.**

The scoring was applied and validated by a team of Ebiquity experts.

Full details of the secondary research sources and scoring framework we used can be found in the appendices of this report.

The media channels we evaluated

- › Cinema
- › Direct mail – direct mail and door drops
- › Magazines – print
- › Newspapers – print
- › Online display – non-video display and banner ads
- › Online video – all video formats including YouTube and broadcaster VOD
- › Out of home – all formats – roadside, airports, rail, point of sale etc.
- › Radio – broadcast
- › Social media – paid advertising on Facebook, twitter etc.
- › TV – all formats excluding broadcaster VOD

Findings in detail

1. Alignment on the most important media attributes

There is a lot of pressure on advertisers and advertising agencies on making the right choices when it comes to selecting the best media for growing a brand during a recession. We set out to understand which media attributes they consider to be most important and which media they perceive to meet those requirements best.

The data reveal that five attributes stand out clearly as the most valuable for achieving success during uncertain times: Increases brand salience; Targets the right people in the right place at the right time; Triggers a positive emotional response; Increases campaign ROI; Maximises campaign reach. This was true of both advertisers and agencies.

Despite the change in focus from growing a brand in the longer-term in 2018 to growing a brand during recession in 2020, the same five attributes score highest in both surveys. However, there has been some re-shuffling. The key change being the rise of 'Increases brand salience' moving up from 4th in the 2018 study to 1st in the latest survey.

This could be an overdue acknowledgement of the crucial nature of salience and distinctiveness for the long-term health of brands. As e-commerce proliferates and search plays an increasingly important role in our path to purchase, brands need to ensure that they are top of mind so that their name is typed into the empty search box when the consumer begins their research. Outside of the top five, it is no surprise in the context of this study to note that the importance placed on a medium's ability to generate 'Short term sales response' has grown five-fold from an index of 9 in 2018 to an index of 45 in 2020. Difficult times often lead organisations to place greater emphasis on marketing to deliver shorter-term metrics and drive immediate revenue. This is particularly true of small advertisers (spending <£10m on media each year) among whom, with an index of 91, this attribute was deemed 10 times more important than in the 2018 analysis.

Q. Thinking now about selecting the right media mix to deliver a campaign that grows your brand during a recession, we'd like to ask you ten very short questions about the importance of different attributes of an advertising medium. For each question I will read out four attributes, please tell me which one is most important and which one is least important. Relative importance calculated using MaxDiff analysis. Base: n=102

2. The perception reality gap is still significant

In terms of perceptions, the second part of the primary research involved asking respondents to rank the 10 different media against each of the 12 attributes, using five options from 'very good' to 'very poor'.

In terms of evidence, the secondary research analysis encompassed more than 100 reports and papers across 50 sources, such as media owners and representative bodies and associations – including 29 studies reviewed for the first time in the 2020 analysis.

The full evidence vs. perception tables for each attribute are included in Appendix 1. While there have been some shifts in terms of both evidence and perceptions within the individual attributes, at a headline level the picture remains broadly similar to 2018. To calculate the overall performance ranking we took the evidence and perception scores for the different media for each attribute and weighted them by the relative importance of the attributes (based on the index). This demonstrates which media channels deliver the best value overall in terms of growing a brand during recession.

As in 2018, well-established media dominate the 2020 evidence rankings, with TV and radio coming out on top. However, with the exception of TV - and despite a rise of three places in the overall perception ranking for radio - all traditional media are undervalued by advertisers and agencies relative to the evidence. In particular, print media fall towards the bottom of the ranking in terms of perceptions while objective research places them third and fourth.

Conversely, newer media types such as online video, social media, and online display - which continue to lack publicly-available data to support their case - benefit from better perceptions to rise above their respective evidence rankings.

Overall performance ranking

2020 - Evidence

1	TV	108.5
2	Radio	102.5
3	Newspapers	82.1
4	Magazines	76.5
5	Out of home	71.2
6	Direct mail	69.6
7	Social media	65.0
8	Cinema	61.4
9	Online video	55.0
10	Online display	49.7

EVIDENCE Based on sum of scores for all 12 attributes with importance weights applied.

2020 - Perception

1	TV	52.5
2	Online video	47.0
3	Radio	46.0
4	Social media	44.6
5	Out of home	43.1
6	Cinema	42.8
7	Online display	37.6
8	Newspapers	37.5
9	Magazines	33.6
10	Direct mail	33.6

PERCEPTION Based on sum of mean scores for all 12 attributes, with importance weights applied. Base: n=102 (each respondent rated 2 attributes).

3. Media spend is driven by perception over evidence

Reviewing the 2018 study, Mark Ritson commented "I have no doubt that the league table scores of the various media are accurate, but the only ranking that matters (when it comes to media spend) is the perceptual one next to it".

How does the data back up this claim? As part of the primary research, we asked our media decision-makers to choose their top five media in terms of importance in helping brands successfully navigate the recession ahead. When faced with a direct question of this nature, advertisers and agencies are even more likely to favour digital media than in the attribute analysis.

1. TV

2. Online video

3. Social media

4. Radio

5. Online display

When asked which media are most important for successfully navigating the recess ahead

Q. Which media do you consider to be most important in helping your brand [ADVERTISERS] / your clients' brands [AGENCIES] successfully navigate the recession ahead? Please drag the top 5 in order of importance to the box on the right. Base: All respondents, n=102

We also asked participants to share their predictions for how 2021 budgets will change for individual media compared to their original pre-COVID 2020 budgets. This reveals further the extent to which media spending is led by perception, with digital media occupying the top three slots in terms of planned increase in expenditure.

...projected spending behaviour for 2021 overwhelmingly **favours newer media types**

In summary, in line with what we understand from psychology about how emotions drive decision-making, the data demonstrates how media spending behaviour is similarly subjective, driven more by perception over evidence.

Digital media audiences and advertising spend will continue to grow but offline media will remain an important part of the media schedule for the foreseeable future. This study suggests that advertising decisions could be better informed if digital media were to address the relative lack of evidence to support their case.

To optimise their media spend, decision makers need to avoid making judgements based on instinct and interrogate their thinking more explicitly to help make more considered choices based on proof and evidence.

“

The way to block errors that originate in system 1 is simple... recognise the signs, slow down and ask for reinforcement from system 2.

Daniel Kahneman

Final thoughts

Appendices

Appendix 1: evidence/perception rankings by media attribute

1. Increases brand salience

2020 - Evidence

2. Targets the right people in the right place at the time

Definition:

Ability of the medium to target in this way

Scoring criteria:

0 - no
1 - yes with limitations
2 - yes

Evidence:

How the medium is bought (Ebiquity knowledge)

Medium	Geography	Demographics	Day of the week	Time of day	Contextual	Addressable	Total Score (weighted/10)
Cinema	2	2	2	1	1	0	7
Direct Mail	2	2	1	0	0	2	6
Magazines	0	2	0	0	1	0	3
Newspapers	2	1	2	0	1	0	5
Online display	1	1	2	2	1	1	7
Online Video	1	1	1	1	2	1	6
Out of home	2	1	1	1	2	0	6
Radio	2	2	2	2	2	1	9
Social media	2	2	1	1	2	2	8
TV	1	2	2	2	1	1	8

*Note: online display and video may be scored 'yes with limitations' because the basis for programmatic targeting varies from first party data-driven to assumption-based. Online video scores take into account that there is variation in targeting ability depending on online video partner (e.g. broadcaster VOD does not allow day of week targeting).

3. Triggers a positive emotional response

Definition:

Emotional connection. Ability to trigger a positive emotional response (mood)

Scoring criteria:

0-5 where 5 is strong evidence of the ad triggering a positive emotional response and 0 where there is least emotional response

Evidence:

Published research

Seamless experience. Non-interruptive seamless part of the media experience

0-5, where 5 is most seamless and least interruptive and 0 is least seamless and most interruptive

Published research/Ebiquity knowledge

Emotional connection

Medium	Evidence	Score
Cinema	<p>Reel Happiness: Understanding the emotions of cinemagoers (2015) People are consistently happier in the cinema than when consuming other media (2011-15). Depending on time of day, cinema goers can be up to 50% happier than the average population at the same time</p> <p>DCM: The Bigger Picture Cinema audiences are four times more likely to be emotionally engaged than a television audience</p>	5
Direct Mail	<p>Royal Mail MarketReach: The Private Life of Mail – Mail In The Home, Hear & Head (2015) People place value on things they can touch, 57% of respondents claim that receiving mail makes them feel more valued. 38% of respondents say that the physical properties of mail influence how they feel about the sender</p> <p>Royal Mail MarketReach: This Time it's Personal (2015) Valued mail created internal feelings (better informed 66%) directly transactional (tempted by product/service 48%) and some related to the relationship with the sender. 20% of respondents associated 9 or more emotional responses to their item</p> <p>Outsmart: The Customer Journey (2012) 51% of DM and door drop ad encounters generated a 'feel response' – 360 out of 710 (6th place)</p>	3
Magazines	<p>Magnetic: Moments that matter (2015) Magazines make people happy. At the moment of magazine consumption, subjective wellbeing measure (based on Paul Dolan's Pleasure/Purpose principle) moves up by +6% Magazine media satisfies both 'pleasure' and 'purpose'</p> <p>Thinkbox Killer Charts (2017) 2% of people said magazine ads 'made you feel emotional' (5th place) and 4% of ads make you laugh (4th place)</p> <p>Outsmart: The Customer Journey (2012) 57% of magazine ad encounters generated a 'feel response' – 312 out of 547 (4th place)</p>	4

5. Maximises campaign reach

Definition:

Maximises 1+ campaign reach (either as a primary driver of reach or extending reach of other media)

Builds frequency (OTS/OTH) as a single medium or in a multi-media campaign

Scoring criteria:

0 - 10 where 10=highest, 0=lowest

0 - 10 where 0=highest, 0=lowest

Evidence:

Standalone reach/frequency (50% of score) - industry sources/IPA Touchpoints, based on a typical heavyweight 4 week campaign Incremental reach frequency (50% of score) - IPA Touchpoints. B. Based on typical scenarios:

- A. Base of TV (£1.5m) with incremental gain of moving 20% budget
B. Base of radio (600k) with incremental gain of moving 50% budget

Medium	Maximises campaign reach %				Builds campaign frequency			
	Solus reach	Incremental reach (A)	Incremental reach (B)	Score	Solus frequency	Incremental frequency (A)	Incremental frequency (B)	Score

8. Guarantees a safe environment

Definition:

Ad appears in an environment that is third party regulated, ad is guaranteed not to appear in an inappropriate context

Scoring criteria:

0-10, where 10 is safest environment and 0 is least safe environment (up to 5 points for editorial environment and 5 points for advertising environment)

Evidence:

Secondary research/Ebiquity knowledge

Medium	Evidence	Score
Cinema	Editorial: BBFC – regulates all films shown in UK cinemas Advertising: Cinema Advertising Association self-regulates using the ASA CAP code	10
Direct mail	Editorial: The Direct Marketing Commission (DMC) oversees and enforces the Direct Marketing Association (DMA)'s Code Advertising: Self-regulated, ASA CAP code	7
Magazines	Editorial: Independent Press Standards Organisation Advertising: Self-regulated, ASA CAP code	7
Newspapers	Editorial: Independent Press Standards Organisation Advertising: Self-regulated, ASA CAP code	6
Online display	Editorial: ISPA Code of Practice – applies to members only, Internet Watch Foundation (monitors for child abuse) Advertising: Self-regulated, IAB Digital Advertising Policy Guide/ASA CAP code JICWEBS guidelines for online brand safety Advertisers must subscribe to third party ad verification CMO Council, Brand protection from digital content infection (2017) <ul style="list-style-type: none"> › A quarter of the world's marketers have reported specific examples of where their digital advertising appeared alongside offensive and compromising content › 72% of brand advertisers engaged in programmatic buying are concerned about brand integrity and digital display placement Pinterest It Pays to Be Positive (YouGov Aug 2020) Around half of over 2,000 respondents surveyed said: If a brand or ad appears alongside harmful content, they assume that the brand endorsed it or are aware that they're adjacent to it; if a brand shows up alongside negative content, it negatively impacts their perception of the brand; If a brand appears next to misinformation (e.g. health or election content), it appears less trustworthy	2
Online video	Editorial: Ofcom regulate broadcaster VOD, BBFC has some involvement with providers of streamed films See online display above Advertising: See online display above	2

Medium	Evidence	Score
Out of home	Editorial: Department for Communities and Local Government and local planning controls Advertising: Self-regulated, ASA CAP code	7
Radio	Editorial: Ofcom regulated Advertising: Self-regulated, Radiocentre, ASA BCAP code	9
Social media	Editorial: Self-moderated, providers are under increasing criticism for failing to moderate content Advertising: Self-regulated using ASA CAP code which covers paid and earned social JICWEBS guidelines for online brand safety. Advertisers must subscribe to third party ad verification See online display for further evidence	2
TV	Editorial: Ofcom regulated Advertising: Self-regulated via broadcaster-funded copy clearance body Clearcast, follows ASA BCAP code	2

9. Low cost audience delivery

Definition:

Low cost audience delivery – media cost per thousand
Low production cost – production as a % of media cost

Scoring criteria:

10 = lowest cost – 1 = highest cost
10 = lowest cost – 1 = highest cost

Evidence:

Ebiquity proprietary data
Secondary research. AA/WARC 2016

Medium	Audience delivery		Production cost		Production cost
	All adult CPT	Score	Production cost	Score	
Cinema	£24.19	10	N/A	3	Production cost assumed to be same as TV
Direct Mail	£44.80	8	N/A	1	CPT Royal Mail Ratecard (addressed mail and door drop) with an assumed 20% discount applied. Production cost assumed to be most expensive
Magazines	£8.93	7	4.3% (all print)	6	
Newspapers	£4.16	5	4.3% (all print)	6	
Online display	£4.43	9	7.1% (all online)	10	Production cost assumed to be cheapest
Online video	£25.06	4	7.1% (all online)	3	Production cost assumed to be same as TV
Out of home	£3.83	3	5.6%	5	
Radio	£1.56	7	2.7%	9	
Social media	£4.04	2	N/A	8	Production cost assumed to be more expensive than online display as more executions needed
TV	£5.45	1	14%	3	

10. Transparent audience measurement

Definition:

Audience measurement tool (survey) is fully transparent and is verified by third parties (JIC). Transparent post campaign delivery reports are provided

Scoring criteria:

0-10, where 10 is the audience measurement is fully transparent and third party verified and 0 is no transparency or third party verification

Evidence:

Secondary research/Ebiquity knowledge

Medium	Evidence	Score
Cinema	<ul style="list-style-type: none"> › Cinema admissions are monitored by ComScore (transparent methodology as census of all cinemas) › Cinemas feed admissions data to contractors for campaign delivery reports › Demographic data collected through survey-based tools such as Fame survey › Very little information about the tools online so lacking in transparency › Measurement tools overseen by the Cinema Advertising Association and industry representatives from film exhibitors and distributors 	6
Direct mail	<ul style="list-style-type: none"> › A Joint Industry Committee (JIC) JICMAIL has recently been formed and is backed by buyer and seller organisations including the DMA, IPA, ISBA, Royal Mail and Whistl. It has set up a panel-based survey tool to measure audiences and deliver media planning metrics to provide an industry currency. Methodology is fully transparent on website. Not yet established in the industry › Royal Mail has ABC accreditation for its Customer Summary report, including auditable proof of delivery. Little information available on Royal Mail website 	7
Magazines	<ul style="list-style-type: none"> › ABC – print verification › AMP is governed by the Publishers Audience Measurement Company (PAMCo) whose stakeholders are the News Media Association, Professional Publishers Association and the Institute of Practitioners in Advertising. The board also has representation from the Incorporated Society of British Advertisers (ISBA). Methodology and questionnaire are fully transparent › JICREG – local newspaper readership (print and online) › No post-campaign delivery reports – campaign impacts have to be derived by agency or third party from NRS data 	9
Newspapers	<ul style="list-style-type: none"> › As magazines above 	9

Medium	Evidence	Score
Online display	<ul style="list-style-type: none"> › No single measurement tool (Comscore and Nielsen are main providers). Providers use different methodologies - mix of panel-based and cookie / logged in user measurement, but not fully independent (e.g. reliance on Facebook user data). Some third party governance, but no joint industry solution or approach. › UKOM (governed by IAB, AOP, ISBA and IPA) sets and governs the UK industry standard for online audience measurement but is not yet classed as a JIC. UKOM only oversees ComScore's methodology (IPSOS from 2021). Nielsen's methodology is approved by their Media Research Council (no transparency on members of the council) › ABC – digital verification › Post-campaign delivery reports available via media owner stats, agency ad server stats, as well as via independent third parties (e.g. audience verification, ad verification). Granularity and validity of these reports varies and is not standardized. From 2021, UKOM endorsed data will be capable of measuring the audience of advertising campaigns delivered online (tbc). 	6
Online video	<ul style="list-style-type: none"> › See online display above › Broadcast VOD not currently measured by BARB. YouTube provides audience analytic tool › Post-campaign delivery – limited media owner stats only for Broadcaster VOD; for non-broadcaster VOD, with variable detail – via media owner stats, agency adserver stats, as well as via independent third parties (e.g. audience verification, ad verification) 	5
Out of home	<ul style="list-style-type: none"> › ROUTE a Joint Industry Currency (JIC). Route is independent of any special interests. Its board of directors has an equal representation from the buyers and sellers of the medium. Methodology is transparent › Digital OOH relies on media owner logs to verify that copy was played and share of voice achieved. Route via the outdoor specialists, provides post-campaign delivery reports 	9
Radio	<ul style="list-style-type: none"> › RAJAR Ltd (Radio Joint Audience Research) is a JIC and is jointly owned by the BBC and by the Radiocentre (the trade body representing the vast majority of Commercial Radio stations in the UK). Overseen by a board and a Technical Management Group (TMG) made up of representatives of the BBC, commercial radio and the advertising community › RAJAR is survey-based, methodology is fully transparent › J-ET is the industry trading platform and provides post-campaign delivery reports 	9
Social media	<ul style="list-style-type: none"> › Facebook/Instagram, Twitter all provide audience analytic tools, ComScore and Nielsen also cover social media audience measurement (see online display). No single measurement tool or JIC › Post-campaign delivery reports available via social media platforms own data or third parties (e.g. ad verification) 	6
TV	<ul style="list-style-type: none"> › BARB is an independent JIC funded by the BBC and commercial broadcasters, methodology is transparent on website › BARB does not cover broadcast VOD. BARB project Dovetail currently in development will allow integrated audience measurement across TV, PC and tablet › BARB provides post-campaign delivery reports 	9
